

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claim 1 (Currently Amended): A method to structure and manage a configuration of an industrial product, taking into account of selected ~~options selected by a customer~~, comprising:

describing a set of technical objects, each technical object either representing a product function or describing an implementation method for making a product configuration ~~for the product function~~, the set of technical objects representing manufacturing options of the industrial product;

updating ~~a database for clarifying~~ a definition of each technical object and of its inter-relations with other of the technical objects in the product configuration ~~by~~, said definition being stored in a database and comprising an expression of rules and constraints; and

interactively and dynamically using said database during ~~definition~~ said configuration of the product, ~~through the selection of the options by the customer.~~

Claim 2 (Original): A method according to claim 1, wherein each technical object represents either a function of an aircraft or describes an implementation method of the aircraft function to create an aircraft configuration.

Claim 3 (Currently Amended): A method according to claim 1, wherein the method operations use:

a knowledge management module;

a contract management module;

an administration module; and

a mass management module;

~~all working on the database.~~

Claim 4 (Original): A method according to claim 3,
wherein the knowledge management module is configured to manage technical objects each representing an aircraft function,
wherein the contract management module is configured to manage fleet configurations of aircraft;
wherein the administration module is configured to manage user profiles, and
wherein the mass management module is configured to manage mass of a customized configuration from data supplied from the contract management module.

Claim 5 (Original): A method according to claim 1, wherein the industrial product is considered as a set of functions in a functional approach.

Claim 6 (Original): A method according to claim 3, wherein the contract management module works in a connected or disconnected mode.

Claim 7 (Currently amended): A method according to claim 1, wherein a technical object oriented configuration is used in which the ~~options~~ product function and corresponding implementation methods are selected directly in a list sorted by at least one of ATA chapter, job category, ~~and~~ or sales policy, the selection being made either individually or globally using a global procedure that joins a possible application and a weight to a set of options in a same functional domain.

Claim 8 (Original): A method according to claim 1, wherein a functional oriented configuration is used that supplies a functional approach to directly select technical objects, specifying required properties of a functional characteristic.

Claim 9 (Currently Amended): A method according to claim ~~4~~ 3, wherein the contract ~~manager~~ management module is configured to start a configuration checking process at any time.

Claim 10 (New): A method according to claim 1, further comprising a step of using a knowledge management module.

Claim 11 (New): A method according to claim 10, wherein the knowledge management module is configured to manage technical objects each representing an aircraft function.

Claim 12 (New): A method according to claim 1, further comprising a step of using a contract management module.

Claim 13 (New): A method according to claim 12, wherein the contract management module is configured to manage fleet configurations of aircraft.

Claim 14 (New): A method according to claim 1, further comprising a step of using an administration module.

Claim 15 (New): A method according to claim 14, wherein the administration module is configured to manage user profiles.

Claim 16 (New): A method according to claim 1, further comprising a step of using a mass management module.

Claim 17 (New): A method according to claim 16, wherein the mass management module is configured to manage mass of a customized configuration from data supplied from a contract management module.
